

# PA-SHARE

PA's State Historic & Archaeological Resource Exchange

PA-SHARE is the PA SHPO's new online data management & cultural resources GIS system.

## Planning

### PA-SHARE puts all of your cultural resource needs in one platform.

PA-SHARE is an innovative platform designed to streamline, speed, and improve every project. By providing one place to access all PA SHPO data, research, and programs, as well as new tools and user dashboards, our new platform can transform project planning. And bring real benefits to developers, consultants, agencies, municipalities, and individuals alike.

## Efficiency

### PA-SHARE Replaces Paper Submissions & Responses

Transitioning from a paper-based system to PA-SHARE means that users can submit and track projects and resources online in real time and receive electronic responses when projects are reviewed. Wizards for most PA SHPO programs like Environmental Review, National Register and Historical Markers streamline the submission process with fillable fields, interactive mapping and photo and file uploads. Use PA-SHARE to submit information about historic and archaeological resources instead of the former Historic Resource Survey Form (HRSF) or Pennsylvania Archaeological Site Survey (PASS) forms.

### Surveyor Puts PA-SHARE in Your Pocket

Surveyor is a form-centric, mobile tool for conducting resource surveys in the field from a variety of hand-held devices such as smartphones and tablets. It uses ESRI's Survey123 to collect information about above ground resources, archaeological sites, and proposed districts. This information is then integrated with PA-SHARE.

## Convenience

### Access Data Remotely

PA SHPO recently completed its 36-month project to digitize this file room, which, when finished, meant that over 1 million scanned pages of information is now more accessible to everyone. With PA-SHARE, the public, professionals, agencies, and partners can access this wide range of data remotely.

### Sophisticated Search & Export

With PA-SHARE's search and export functionality, users can search for resources, projects, markers, surveys and reports using a criteria-based search or find out what we have related to a particular area with the spatial search. The results can be printed, exported to .csv or downloaded as a shapefile—all from the comfort of your home or office.
